

Tailored AI agentic systems for maritime operations.

We build and integrate multi-agent AI automated workflows for the work your team does by hand today. The demurrage claim engine is one we shipped first.

Demurrage, EU ETS, FuelEU, post-voyage reconciliation, cargo damage, and more. All on one agent pipeline.

LIVE DEMO CLAIM, REPRODUCIBLE

EUR 84,375.00

TODAY, IN YOUR OPERATIONS TEAM

Half of every maritime operational workflow is still done by hand, even though the inputs are structured documents.

A claims officer spends hours per voyage reconciling a Charter Party, Notice of Readiness, and Statement of Facts into one claim letter. The same shape of work shows up in emissions reporting, post-voyage reconciliation, cargo damage, and freight disputes. High stakes, tight deadlines, and a wrong number costs you the claim.

Hours per claim Time a claims analyst spends on a single disputed voyage, by hand.	90 days Typical demurrage time bar. Miss it, the claim is forfeited.	\$30–80k Demurrage per idle ship per day, Capesize to VLCC.	€10B/yr EU ETS cost to shipping from 2026, on the same documents.
--	--	---	---

OUR APPROACH

We build and integrate multi-agent AI automated workflows for the work your team handles by hand today.

Not a chatbot. Not a form. A pipeline of specialised agents that read your documents, do the work, and hand back an auditable output. We start from your workflow, your documents, your terminology. Then we ship a system that drops into your existing review chain.

TAILORED

Built around your charter forms and your team's review steps. Not a one-size SaaS.

AGENTIC

A pipeline of specialised agents that hand work to each other, not one monolithic prompt that hallucinates.

INTEGRATED

Sits behind your inbox and your TMS, inside the review chain you already use. Embedded, not bolted on.

WHAT WE SHIPPED FIRST LIVE

Three voyage PDFs in, one cited, defensible demurrage claim out, in under a minute.

BEFORE LAYTIMELY

Hours of manual reconciliation per voyage.

Charter Party, Notice of Readiness, Statement of Facts pulled into Excel by hand.

Laytime calculated row by row, contested events flagged in a separate column.

Claim letter drafted from a template, cited by memory, then reviewed.

Time bar tracked in someone's calendar; misses are total losses.

WITH LAYTIMELY

Under one minute, end to end, with citations.

Upload the three PDFs (or forward the email thread). The pipeline runs in the background.

Laytime is summed in deterministic Python, not by the model. Every figure is reproducible.

Claim letter drafted with every line citing its CP clause and SoF event id.

Time bar surfaced on every claim; export to PDF, Word, or Excel; send via email from the app.

THE PIPELINE, END TO END

Four specialised agents. One pipeline. Every figure cited to its source.

This is the architecture we replicate for every new workflow. Each agent has one job. Each handoff is structured data, not free text. LLM for judgement, Python for money. That separation is why the output holds up in a dispute.

THE TRUST ARCHITECTURE

Numbers a court can audit. Arguments a counterparty cannot dismiss.

Every figure cited

to its CP clause and SoF event id

Each line in the claim letter references the contract clause and the port-log event it came from. A reviewer or a lawyer can audit any number in seconds, without re-running the calculation.

Deterministic math

Python sums hours, not the model

The hours are summed by a plain Python function that is locked by an automated test. The number on screen is reproducible and identical between runs. No LLM hallucination is possible on the figures themselves.

Time bar tracked

on every claim, from day one

The 90-day demurrage deadline is surfaced on every voyage so a valid case never expires on a forgotten calendar. We refuse to ship a feature that quietly drops a citation or a deadline.

Reviewable, editable

your team stays in the loop

Every claim letter is editable in the browser. Highlight a sentence, refine it with AI, or rewrite by hand. Export to PDF, Word, or Excel. Send via email. The audit trail follows.

LIVE, TODAY, AT LAYTIMELY.COM

A clean web app your team logs into. No installs, no spreadsheets, no consultant in the loop.

Drag and drop the three voyage documents. A new case lands on your dashboard.

Watch the four agents hand work to each other, then the EUR 84,375.00 quantum land.

Highlight a sentence, refine it with AI, export the cited claim as PDF, Word, or Excel.

Try the live demo at **laytimely.com**. Credentials on request. Run the three demo PDFs through it yourself and you will see the same EUR 84,375.00 figure we did. That is the quickest sanity check.

THE SAME PIPELINE, NEW WORKFLOWS

Demurrage is the first one we shipped. The same pipeline scales to the rest of the document-heavy maritime work your team handles.

Demurrage claims

LIVE

Owner and charterer perspectives, time-charter and voyage-charter support, multi-port voyages.

EU ETS & FuelEU compliance

Q3 2026

From voyage documents to compliant emissions reporting, EUA management, and penalty exposure forecasts.

Claims Radar, live exposure

Q3 2026

Real-time demurrage exposure across your fleet from AIS, weather, and port-log feeds, before the time bar starts.

Post-voyage reconciliation

DESIGN PARTNER

Bunker discrepancies, port disbursement audits, hire statements, all reconciled from the same document pipeline.

Cargo damage & freight disputes

SCOPING

Same pattern as demurrage: structured extraction, deterministic math, cited argument, drafted letter.

Your workflow

TALK TO US

If your team handles a document-heavy workflow with hard deadlines, we can scope an agent for it.

PILOT PROGRAMME

A short pilot that proves the workflow on your own documents before you sign anything.

The motion

Week 1	We map your workflow with one of your senior operators. We agree on the input documents and what counts as the right output.
Week 2-3	We tune the pipeline on a handful of your real past voyages. Output is reviewed by your team line by line.
Week 4	Live on a workspace owned by your team. Members invited via your domain. We watch the first week alongside you.
From week 5	Production. Monthly review of accuracy and exceptions, and which new workflow we scope next.

What stays yours

Data	Your documents stay in your tenant. We do not train models on your data; the LLM provider does not retain it past the call.
Audit log	Every action (upload, edit, export, send) is recorded for your compliance team.
Exit	You can export every case as PDF and the raw structured timeline as JSON at any time. No lock-in by file format.
Pricing	Pilot is fixed-price for the first month. Production is per workspace, with success-fee options on recovered demurrage.

TRY IT NOW, OR SCOPE A PILOT

From three documents in, to a finished claim out, in under a minute.

The fastest path is the live demo. We will give you credentials, three demo PDFs, and walk you through running the EUR 84,375.00 figure on your own machine. Then a 30-minute call to scope a pilot on one of your past disputed voyages.

LIVE DEMO

laytimely.com

Login credentials and the three demo voyage PDFs available on request.

SCOPE A PILOT

founders@laytimely.com

A 30-minute call, on your past disputed voyages, no commitment.

BUILT AT THE ACG AI LAB, ATHENS

Two AI researchers. We both work on verifiable AI that shows its work. That is what high-stakes claims demand.

**Dimitris Kalligaridis**

SOFTWARE ENGINEER, AMAZON · AI RESEARCH, ACG AI LAB

Distributed systems, optimisation, and applied ML. Built backend infrastructure, authorisation, and production performance at Amazon; a Google Summer of Code 2026 contributor to the Eclipse Foundation. Researches reinforcement-learning agents that decide under uncertainty. The conviction he brings to Laytimely: make the math explicit, and let every number trace back to its source.

**Roman Dolgopolyi**

EXPLAINABLE AI & CYBERSECURITY, ACG AI LAB · INCOMING PHD, NORTHEASTERN

Published work on explaining AI decisions in cancer-cell diagnosis, and benchmarks for AI safety compliance. The same conviction shows up in Laytimely: AI trusted with high-stakes decisions has to be transparent and verifiable. Never a black box.

Why Greece, why now. Greek shipowners control roughly 20% of the world fleet, more than any other country. Most of that fleet is reachable within a few square kilometres of Piraeus. We build close to the customer.
